Chemical Name: ESCITALOPRAM OXALATE 10MG

Date: 2024/04/09  
Tx: 18679914  
DIN: 02430118

### Common uses

This medication is typically used for depression. It may also have other uses. When used as a treatment for a mood disorder, this medication produces its full effect only after a few weeks.

### How to use this medication

This medication is typically used only once a day. However, your pharmacist may have suggested a different schedule that is more appropriate for you. Take it regularly and continuously to maintain its beneficial effects.

It is not advisable to stop using this product suddenly, particularly if you have been on it for several weeks. If you are considering stopping the medication, talk to your pharmacist first. If you forget a dose, take it as soon as you remember -- unless it is almost time for your next dose. In that case, skip the missed dose. Do not double the next dose to catch up.

This medication may be taken with or without food. Consuming alcohol may intensify the effect of this product. If you choose to drink alcohol, do so in moderation. Talk to your health care professional to find out exactly how much alcohol you can drink.

As with most medications, this product should be stored at room temperature. Store it in a secure location where it will not be exposed to excessive heat, moisture or direct sunlight.

### Possible side effects

In addition to its desired action, this medication may cause some side effects, notably:

- it may cause dryness of the mouth
- it may cause diarrhea
- it may cause dizziness - use caution when getting up from a lying or sitting position and use caution if driving
- it may cause either drowsiness or excitability -- use caution until you know how you will react
- it may cause nausea or, rarely, vomiting.

Each person may react differently to a treatment. If you think this medication may be causing side effects (including those described here, or others), talk to your health care professional.

### Additional information

This medication may interact with other medications or supplements, sometimes significantly. Many interactions, however, may be dealt with by a dosage adjustment or a change in medication schedule. Check with your pharmacist before using this medication in combination with any other medications (including non-prescription products), vitamins or natural products.

Rarely, this product causes potentially severe reactions, mostly if taken at high doses or with some other drugs. If you experience agitation, confusion, diarrhea, fever, tremor and muscular rigidity or contractions, you should contact your doctor.

A treatment with this medication requires regular monitoring by a doctor. Be sure to see your doctor for all regularly scheduled appointments.

### General information

When meeting with any health professional, it is important for you to share the following information:

- Your medical history and allergies (medication, food, or other);
- If you're pregnant or want to become pregnant, or if you're breastfeeding;
- If you use tobacco or cannabis or its derivatives, or if you use recreational drugs;
