layers of
security
←git→

Structure
Verifies
+ securs

nodes

direct
"RAID"
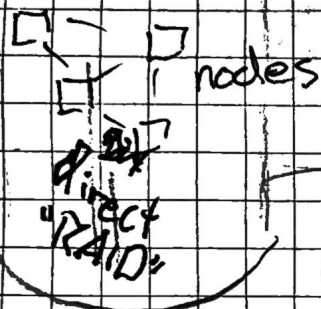

connected
syncing
w/ other
trees

Assetance.

outter nodes are
- simple; may be a
smart fridge; unsecure
- inner layers → more privacy
& more optimized for st/no organizeny
growth

Technical Bits:

• need Syntax for sources /
reference

• Verify personage

• local communication → BT radio
waves.

Goal
• bak
• rol
d
• eve

Issu
• se
• m
• C
As
• re

Goals:
- backwards & cross hardware capabilitie
- robust "trees" as pillars for a
  decentralized "Human" verified "sources"
- everyone has their own support tree
  ^independant

Issues:
- Security
- minimal resource use
- Copyright

Aspirations
- remove AI from capitalism

[MVP: 1.0.0 inbound text handler
- main USB w/ Primary problem/task router
- signal text   1stfeatures
- create a new & parent · birth
  drive as easy as possible · optimizer &
  future   trouble shooting
- replace   el-call fe

- Tie to geo-location —> land tax is
                         only viable
                         tax
